Ansh Sharma

GENERATIVE AI ENGINEER

+91 8269618230 | eranshsharma016@gmail.com | LinkedIn | GitHub | Portfolio | Chhatarpur, Madhya Pradesh, India

Professional Summary

Entry-level Generative AI Engineer with hands-on project experience turning raw audio and video into structured, grounded LLM outputs: transcripts, summaries, action items, decisions and retrieval-based question answering. Comfortable across the full stack of an LLM application, from speech transcription (Whisper, Sarvam AI) and chunking, to embeddings and vector retrieval (LangChain, Chroma), to FastAPI backends and React/Streamlit interfaces. Every project is deployed with a live demo and a public repository, so the work can be inspected and tried directly. Interested in building useful, grounded LLM applications where answers can be traced back to their source material.

Technical Skills

LLM Applications: OpenRouter integrations, LLM-provider integration, prompt-based summarization, structured extraction (action items, decisions, open questions), transcript-grounded question answering
RAG & Retrieval: LangChain, Chroma, Qdrant, embeddings, transcript chunking, semantic retrieval, passing retrieved context to the LLM
Speech & Audio Processing: Whisper, Sarvam AI, chunked audio transcription, English/Hinglish transcription workflows
Backend & APIs: Python, FastAPI, Streamlit, Node.js, Express, REST APIs
Data & Frontend: MongoDB, Redis, Qdrant, Tavily search integration, React, Vite, JavaScript, HTML, CSS
Deep Learning & Tools: TensorFlow/Keras, LSTM, TensorFlow.js (on-device browser inference), Git, GitHub, Vercel deployments

Projects

AI Video Analyzer | Transcription, Summarization and RAG Q&A | Repository · Demo

Python, FastAPI, Streamlit, Whisper, Sarvam AI, OpenRouter, LangChain, Chroma, RAG

- Built an end-to-end pipeline that accepts a YouTube link or a local audio/video file and produces a full transcript, a concise summary, action items, key decisions and open questions, so a long recording can be understood in minutes without watching it end to end.
- Used LLM integration through OpenRouter for summarization and structured extraction, turning long, unstructured transcripts into clearly separated sections (summary, action items, decisions, open questions) that a reader can scan quickly and act on.
- Implemented transcript question answering with a Chroma-backed retrieval workflow: transcript chunks are embedded and indexed, and the most relevant passages are retrieved and passed to the model as context, so answers stay grounded in what was actually said in the video.
- Handled long media by splitting audio into smaller chunks before transcription, and supported both English and Hinglish transcription paths through configured providers (Whisper and Sarvam AI), making the tool useful for the mixed-language content common in India.

CortexAI | Full-Stack AI Chat Platform | Repository · Demo

React, Vite, Node.js, Express, LangChain/LangGraph, MongoDB, Redis, Qdrant, Tavily

- Designed and documented a multi-service AI chat platform with separate gateway, authentication, chat, agent and billing services, giving each concern its own boundary so the system is easier to understand, extend and debug.
- Configured LLM-provider, Tavily web-search and Qdrant vector-search integrations inside a modular backend, so the language model, live web search and stored-knowledge retrieval can each be swapped or improved independently of the rest of the application.

Next Thought | LSTM Sentence Generator | Repository · Demo

TensorFlow/Keras, LSTM, TensorFlow.js, JavaScript, Vite

- Trained an LSTM language model in TensorFlow/Keras that predicts the next word from a user's prompt and extends it into a full sentence through iterative inference, using a saved tokenizer to convert between text and model inputs.
- Exported the model and tokenizer to TensorFlow.js so inference runs entirely in the browser; prompts are processed on-device and never leave the user's machine, which also removes the need for a hosted inference server.

Experience

Artificial Intelligence Intern, CODTECH IT Solutions | Remote — Oct 2024 - Nov 2024

- Worked on AI-agent-related tasks during a remote internship, taking assigned problems and delivering the work independently while communicating progress remotely; used Python, Pandas, NumPy and scikit-learn for data handling and model-building tasks.

Leadership Experience

Community Lead & Founding Member | Google Developer Groups (GDG/GDSC), SAGE University, Indore — 2024 - 2025

- Helped build, engage and nurture the campus developer community through collaborative initiatives, supporting a welcoming, growth-oriented tech ecosystem where students at different levels could learn from each other and share what they were building.

Education

SAGE University, Indore · B.Tech Computer Science and Engineering (Core), CGPA 8.03/10 · 2022 - 2026
Rani Durgabati Higher Secondary School · Class XII · **Government Model Higher Secondary School, Chhatarpur, Madhya Pradesh** · Class X

Certifications

Oracle University: Agentic AI Certified Foundations Associate (Jul 2026; valid through Jul 2028) · **Tata / Forage:** GenAI Powered Data Analytics Job Simulation (Jul 2026) · **JPMorgan Chase / Forage:** Quantitative Research Job Simulation (Jul 2026) · **Quantium / Forage:** Data Analytics Job Simulation (Jul 2026) · **be10x:** AI Tools and ChatGPT Workshop (Jun 2026)
