Ansh Sharma

MACHINE LEARNING ENGINEER

+91 8269618230 | eranshsharma016@gmail.com | LinkedIn | GitHub | Portfolio | Chhatarpur, Madhya Pradesh, India

Professional Summary

Entry-level Machine Learning Engineer with hands-on project work in credit-risk prediction, preprocessing pipelines, classification workflows and LSTM-based text generation. Takes models past the notebook: trained models are saved with Joblib, served through FastAPI inference APIs, and exposed in deployed web applications that support both single predictions and batch CSV scoring. Familiar with Python data libraries, scikit-learn, TensorFlow/Keras and browser-side inference with TensorFlow.js. Interested in applying data-driven methods to practical prediction problems.

Technical Skills

Programming & Data: Python, Pandas, NumPy, JavaScript
Machine Learning: scikit-learn, Extra Trees, classification, preprocessing pipelines (categorical and numerical features, missing-value handling), probability-based prediction, decision thresholds, batch scoring
Deep Learning & NLP: TensorFlow/Keras, LSTM, tokenization, TensorFlow.js (on-device inference)
Model Serving & Backend: FastAPI, Pydantic, REST APIs, Joblib model persistence
Applied AI & Web: LangChain/LangGraph, RAG, OpenRouter, HTML, CSS, JavaScript, React, Vite, Git, GitHub, Vercel deployments

Projects

Credit Security Risk Relay | Credit-Risk Prediction App | Repository · Demo

Python, scikit-learn, Extra Trees, Pandas, FastAPI, Joblib

- Developed a credit-risk prediction application that supports both individual applicant assessment and batch CSV scoring, so a single case can be checked instantly and a whole file of applicants can be scored in one run.
- Trained an Extra Trees classifier with a preprocessing pipeline covering both categorical and numerical applicant and loan attributes, and persisted the fitted pipeline with Joblib so exactly the same transformations are applied at prediction time.
- Documented nine input fields and a prediction API; the fitted pipeline handles missing savings-account values, so incomplete applications still produce a prediction instead of failing.

Risk for Loan | Loan-Default Probability Prototype | Repository

Python, Pandas, FastAPI, Pydantic, HTML, CSS, JavaScript

- Built a loan-default probability prototype that accepts borrower and loan details through a web interface and returns a prediction, making the model usable by someone who never touches code.
- Integrated a saved classification model with a decision threshold that converts the predicted probability into a clear high-risk or low-risk label, separating the model's score from the business decision made on top of it.

Next Thought | LSTM Sentence Generator | Repository · Demo

TensorFlow/Keras, LSTM, TensorFlow.js, JavaScript, Vite

- Trained an LSTM language model in TensorFlow/Keras with a tokenizer that predicts the next word from a prompt and extends it into a full sentence through iterative inference.
- Converted the model and tokenizer to TensorFlow.js so inference runs on-device in the browser; the combined model and tokenizer assets are approximately 6.8 MB, small enough to load quickly without any server-side inference.

CortexAI | Full-Stack AI Chat Platform | Repository · Demo

React, Vite, Node.js, Express, LangChain/LangGraph, MongoDB, Redis, Qdrant, Tavily

- Designed and documented a full-stack AI chat platform with gateway, authentication, chat, agent and billing services, and configured LLM-provider, web-search and vector-search integrations to support extensible AI application workflows.

Experience

Artificial Intelligence Intern, CODTECH IT Solutions | Remote — Oct 2024 - Nov 2024

- Worked on AI-agent-related tasks during a remote internship, taking assigned problems and delivering the work independently while communicating progress remotely; used Python, Pandas, NumPy and scikit-learn for data handling and model-building tasks.

Leadership Experience

Community Lead & Founding Member | Google Developer Groups (GDG/GDSC), SAGE University, Indore — 2024 - 2025

- Helped build, engage and nurture the campus developer community through collaborative initiatives, supporting a welcoming, growth-oriented tech ecosystem where students at different levels could learn from each other and share what they were building.

Education

SAGE University, Indore · B.Tech Computer Science and Engineering (Core), CGPA 8.03/10 · 2022 - 2026
Rani Durgabati Higher Secondary School · Class XII · **Government Model Higher Secondary School, Chhatarpur, Madhya Pradesh** · Class X

Certifications

Oracle University: Agentic AI Certified Foundations Associate (Jul 2026; valid through Jul 2028) · **Quantium / Forage:** Data Analytics Job Simulation (Jul 2026) · **JPMorgan Chase / Forage:** Quantitative Research Job Simulation (Jul 2026) · **Tata / Forage:** GenAI Powered Data Analytics Job Simulation (Jul 2026) · **be10x:** AI Tools and ChatGPT Workshop (Jun 2026)
